¹ AWD manufactures a complete line of prefabricated drainage products for a wide range of construction applications. Critical design considerations typically include core compressive strength, water flow rate, and geotextile filter fabric strength and filtration properties. References to competitive products are intended as a guideline for selecting product equivalents or alternates and are offered for the user's investigation and verification. Product selection and determination of suitability is the sole responsibility of the user. Please contact AWD Technical Services for additional assistance regarding product selection for specific applications and project conditions.

² Recommended alternate when the competitive product is already specified on a project and the AWD alternate must "meet or exceed".

³ Recommended alternate based on meeting the intended function/purpose of the competitive product in common applications.
