

EcoTube™ Hanging Bag Test Bag

How to Use EcoTube™ the Test Bag

1. Collect 5 gallons of the material to be tested using a pail.
2. Fill a small container with 500 ml of warm tap water.
3. Using a pipette, collect 2 ml of neat polymer and add to the warm water and mix.
4. Add this solution to the 5 gallons of material and mix using a mixer attached to a drill.
5. Continue mixing until a “cottage cheese” consistency has been achieved.
6. Pour material into the Hanging Bag.
7. Place the empty pail under the bag.
8. If reusing the hanging bag, rinse thoroughly
9. Repeat steps as often as desired.
